

Wed, 17 Apr 2019 14:44:00 GMT antenna theory and design 3rd pdf - In radio and telecommunications a dipole antenna or doublet is the simplest and most widely used class of antenna. The dipole is any one of a class of antennas producing a radiation pattern approximating that of an elementary electric dipole with a radiating structure supporting a line current so energized that the current has only one node at each end. Note The following antenna projects were gathered from the internet, therefore the author does not endorse any of the projects, you are on your own. Sat, 16 Feb 2019 23:19:00 GMT Amateur Radio Antenna Projects - AC6V - In radio engineering, an antenna is the interface between radio waves propagating through space and electric currents moving in metal conductors, used with a transmitter or receiver. In transmission, a radio transmitter supplies an electric current to the antenna's terminals, and the antenna radiates the energy from the current as electromagnetic waves (radio waves).
